PROFESSIONAL SUMMARY

B.Tech student in Artificial Intelligence & Data Science (graduating May 2028) with a strong foundation in Python, SQL, data analytics, and machine learning. Skilled at turning raw data into actionable insights using Power BI, Excel, and Python, with hands-on experience across four independent projects spanning computer vision, NLP-adjacent applications, and predictive modeling, plus real-world exposure through a machine learning internship. Seeking a Data Science, Data Analyst, or AI internship to apply analytical rigor and problem-solving skills to real business challenges.

EDUCATION

B.Tech, Artificial Intelligence & Data Science — Ramco Institute of Technology
Expected: May 2028

Relevant Coursework: DBMS, Data Structures & Algorithms, Machine Learning, Statistics for Data Science, Artificial Intelligence

INTERNSHIP EXPERIENCE

Machine Learning Intern — GradTwin
June 1 – July 3, 2026

- Gained hands-on exposure to real-world ML workflows and industry best practices by contributing to live machine learning tasks under senior guidance.
- Applied end-to-end ML techniques — **data preprocessing, model building, and evaluation** — to solve practical business problems during the internship.

TECHNICAL SKILLS

Programming: Python, SQL(MySQL, PostgreSQL - CRUD Operations, Joins, Aggregations)

Data Tools: MS Excel, Power BI

Libraries: Pandas, NumPy, Scikit-learn, Matplotlib,Opencv

AI/ML: Machine Learning Algorithms, Deep Learning, Data Cleaning, Feature Engineering, Model Evaluation

Soft Skills: Communication, Problem-Solving, Teamwork

PROJECT EXPERIENCE

Face Mask Detection Using Deep Learning
Tools: Python, Flask, TensorFlow/Keras, MobileNetV2, OpenCV, NumPy, HTML, CSS, JavaScript

- Built a real-time face mask detection system using computer vision and deep learning to classify images and live webcam input as Mask Detected or No Mask Detected.
- Deployed a Flask-based web application featuring bounding-box visualization and confidence scores for each prediction, making model outputs interpretable for end users.

Student Score Prediction
Tools: Python, Pandas, NumPy, Scikit-learn, XGBoost, Streamlit

- Developed a machine learning model to predict student scores from study hours, attendance, and previous scores.
- Benchmarked multiple regression algorithms — Linear Regression, Decision Tree, Random Forest, SVR, and XGBoost — to identify the best-performing approach.
- Selected Linear Regression as the final model based on performance and interpretability, and deployed it as an interactive prediction app using Streamlit.

Furniture Shop Website
Tools: HTML5, CSS3, JavaScript

- Designed and built a responsive furniture e-commerce frontend with product listings, intuitive navigation, and interactive UI elements.

CERTIFICATIONS

- Introduction to Data Science — SkillUp
- Data Science Essentials with Python — Cisco
- Introduction to Machine Learning — NPTEL
- The Joy of Computing Using Python — NPTEL
